# DATA GOVERNANCE

Data Management

Is Data an Asset to your organisation?

Data Governance is exercise of authority and control over data asset management.

"Very good course with excellent explanation of business relevance"

Robinson Ryan is part of an initiative to increase the certification of Australia Data Management Professionals

Data Governance

Data Governance is the exercise of authority and control over data assets.

This 1 day course provides a practical foundation in understanding and implementing Data Governance.

Rich in exercises to re-enforce the study material, the course ensures the students are equipped to improve Data Governance in their own organisations.

The course covers:

- Introduction to Data Governance
- Measuring the management of data assets
- Data Strategy purpose and content
- Processes, input and outputs
- Scenario based case study
- Setting up governance in your organisation.

The course incorporates time to review your particular organisational experience.
